

Apprenticeship offer - Infineum

Improve sustainability of our processes, especially by reducing energy consumption, process wastes and carbon footprint.

About Infineum:

We exist to create a sustainable future through innovative chemistry.

We are a Specialty Chemicals Company with strong research and development capabilities around innovative chemistry.

We provide products needed on the journey towards the electrification of mobility, while helping to make the internal combustion engine as clean as it can be. As well as using our capabilities to generate sustainability advantages to countless new markets around the world.

With production facilities worldwide, there has never been a better time to start a career at Infineum.

Infineum offers students the opportunity to get hands-on experience working alongside respected industry experts. You will have the opportunity to contribute to relevant and challenging projects in your area.

Your apprenticeship with Infineum France:

You will join a team of 6 Process Engineers who provides technical expertise to our manufacturing units, supporting continuous improvement initiatives in terms of HSE, product quality, reliability, sustainability. The team is based within the Berre plant (South of France, between Aix-en-Provence and Marseille), part of the manufacturing organization.

You will have the opportunity to gain a deep knowledge of a complex chemical plant, using various types of processes and chemistries, with outstanding HSSE standards. It is therefore an ideal opportunity for growth for a young Engineer and possible future employment.

Your Responsibilities:

- * You will progressively take leadership on the development of improvement /sustainability projects.
- * With the support of the team, you might also contribute to troubleshooting activities on the different units.
- * You will have to determine needs to work on individual projects/problems and participate in setting own priorities for working these problems.
- * You will have to ensure compliance with internal HSE framework.
- * You will have the opportunity to work with numerous interfaces (Manufacturing technology /unit supervisor/ shift operators /reliability engineer/ project engineers/ plant lab/ plant maintenance/ logistics, other plants abroad /etc...).

Skills and capabilities

You are ideally a Chemical Engineer (Master degree in chemical engineering or equivalent), with a strong technical background.

In a short time you are expected to become autonomous in your role, which requires close collaboration with site and abroad colleagues, proactivity and decision-making ability. Therefore you have to be perfectly fluent in French and demonstrate very good skills in English.

You will have to demonstrate your capability to deal with a wide range of interfaces on technical, managerial and HSSE subjects.

If you are interested, please send your cover letter and resume to:
